## **Quality Control Assays**

This lot of RNase Solution (A797) passes the following Quality Control specifications:

**Endonuclease Assay:** To test for endonuclease activity, 1µg of Type I supercoiled plasmid DNA is incubated with 4µg of RNase Solution for one hour at 37°C. Following incubation, the supercoiled DNA is visualized on an ethidium bromide-stained agarose gel to verify the absence of visible nicking or cutting.

**DNase Assay:** To test for nuclease activity, 50ng of radiolabeled DNA is incubated with 5µl RNase Solution for 5 hours at 37°C. The specification is <1% release for DNase as monitored by scintillation counting of TCA-soluble material.
